

# PINOBIO

**Pinosylvins as novel Bioactive Agents for Food Applications**  
Pinosilvini kot novi bioaktivni agensi za uporabo v prehrani

WoodWisdom-Net project  
7 FP ERA NET

**prof. dr. Primož Oven**

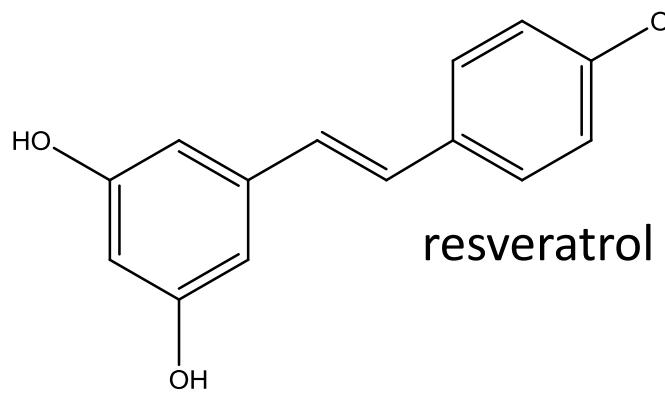

(primoz.oven@bf.uni-lj.si)

Univerza v Ljubljani, Biotehniška fakulteta,  
Oddelek za lesarstvo

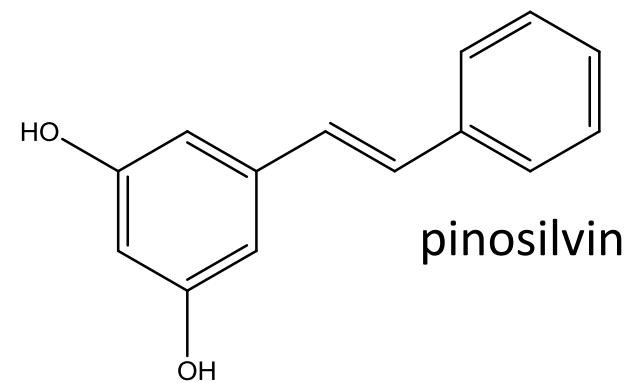

# Ozadje projektne ideje

- Les sestavlja makromolekule celičnih sten in spojine z majhno molekulsko maso, ki jih običajno imenujemo ekstraktivi
- Dragoceno skupino ekstraktivov predstavljajo fenolne spojine kot so npr. tanini, flavonoidi, lignani in **stilbeni**

resveratrol

pinosilvin

- Resveratrol - preprečuje kardoivaskularne bolezni, poveča občutljivost za inzulin, zmanjšuje nivo glukoze v krvi, deluje antimikrobno na nekatere bakterije in dermatofitske glive itd
- Pinosilvin – spojina v lesu borov, ki izkazuje primerljive lastnosti

# Namen in cilji projekta

Namen projekta je ovrednotiti in razviti uporabo pinosilvina kot bioaktivne, antimikrobne in/ali antidiabetične spojine za uporabo v različnih izdelkih prehranske industrije:

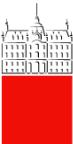

- Raziskati najboljše surovinske vire in načine za njegovo pridobivanje iz lesa borov
- Raziskati in ovrednotiti bioaktivnost pinosilvinov in njegovih derivatov (*Listeria*)
- Proučiti učinkovitost spojin *in vivo* in jih primerjeti z lastnostmi resveratrola
- Oceniti industrijski potencial pinosilvinov za morebitni razvoj komercialnih proizvodov

# Koordinator in partnerji

- **Koordinator:** prof. dr. Atte von Wright, **University of Eastern Finland**, Finska
- **University of Vigo**, Španjia, prof. dr. Juan Carlos Parajo
- **Latvian State Institute of Wood Chemistry**, Latvija, prof. dr. Galina Telysheva
- **Univerza v Ljubljani**, Slovenija, prof. dr. Primož Oven, doc. dr. Ida Poljanšek, Viljem Vek, NN
- **Åbo University**, Finska, prof. dr. Stefan Willför

Selection of growth sites and trees, felling

Dissection and preparation for extraction

Preparation of pinosylvin

Extraction

Content of lipophylic and hydrophilic extractives

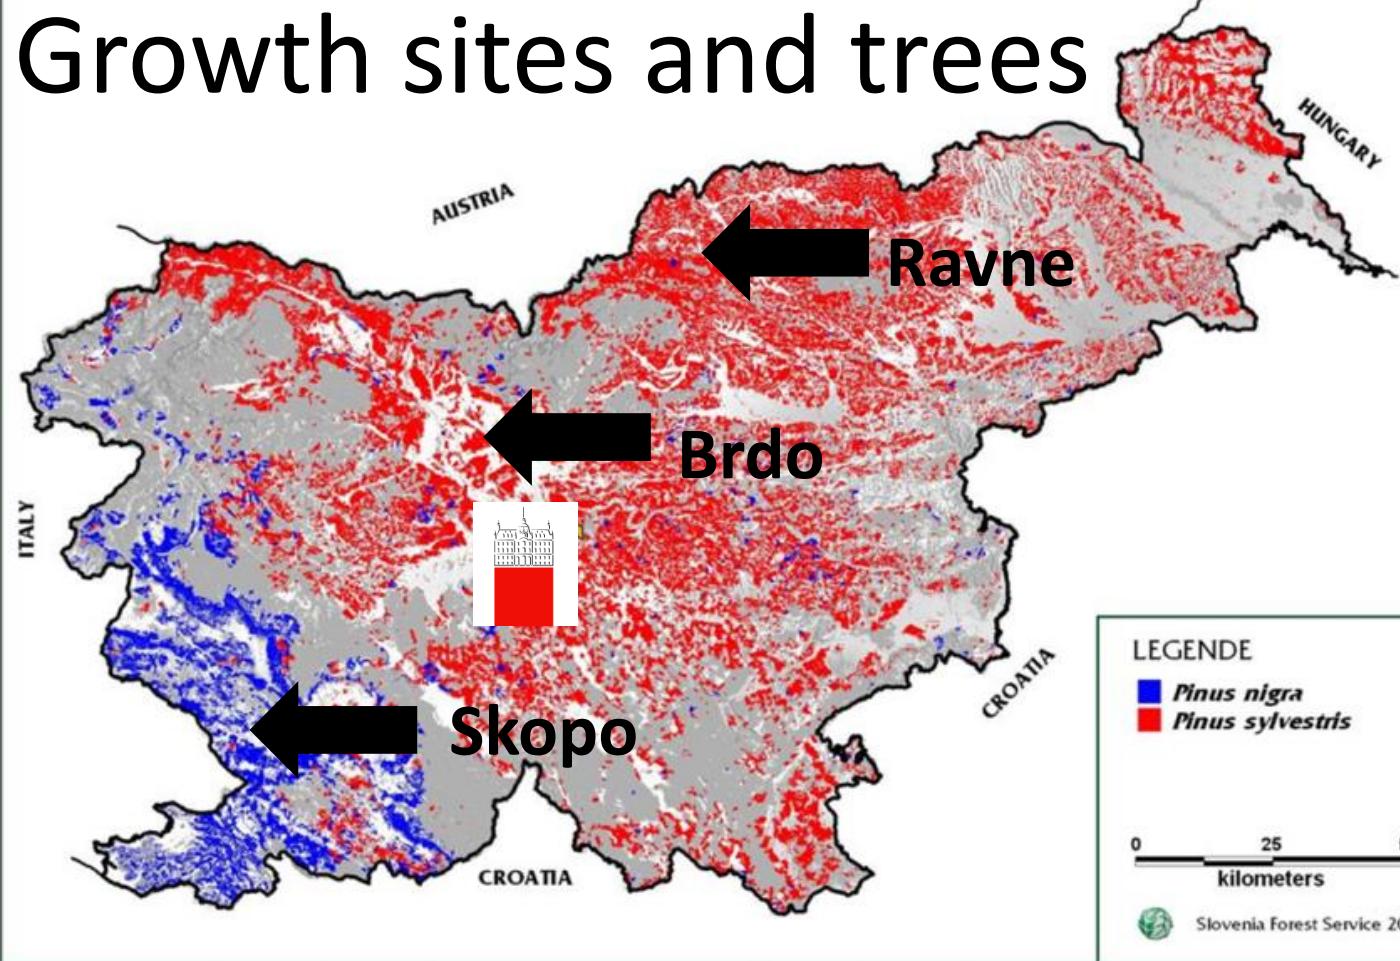

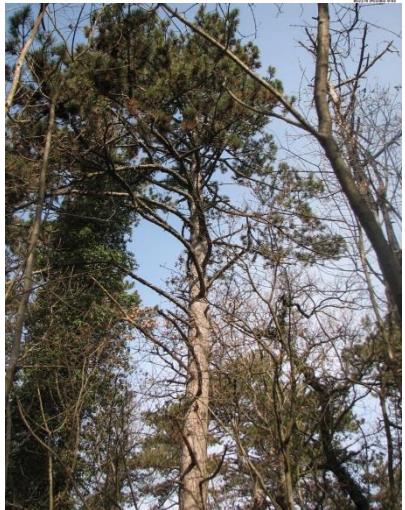

Efficiency against:  
• wood decay fungi  
• bacteria

Content of total phenols

PS and PSMME

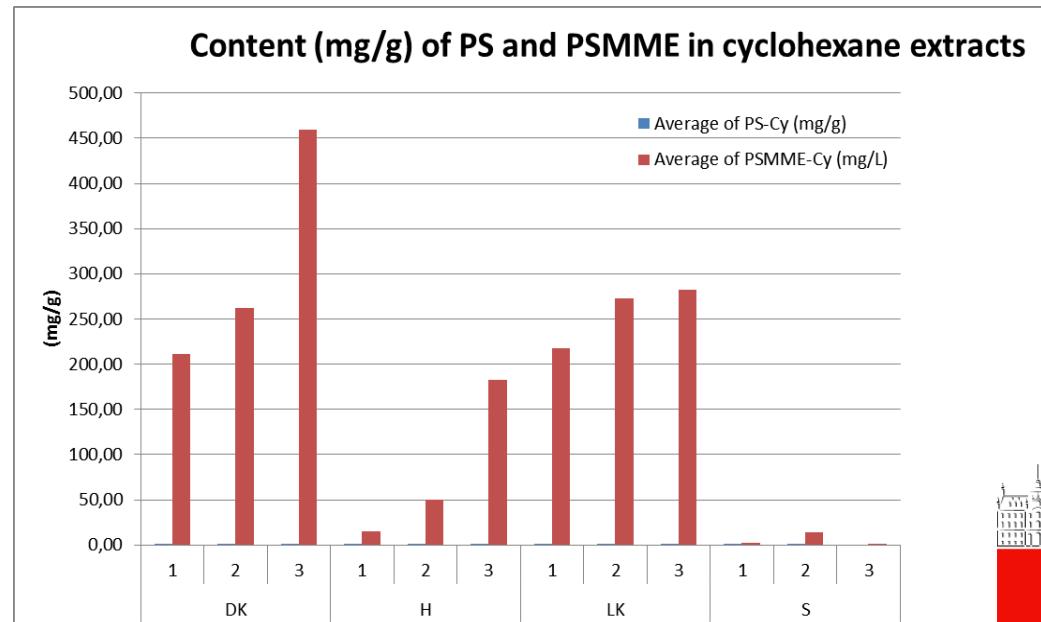

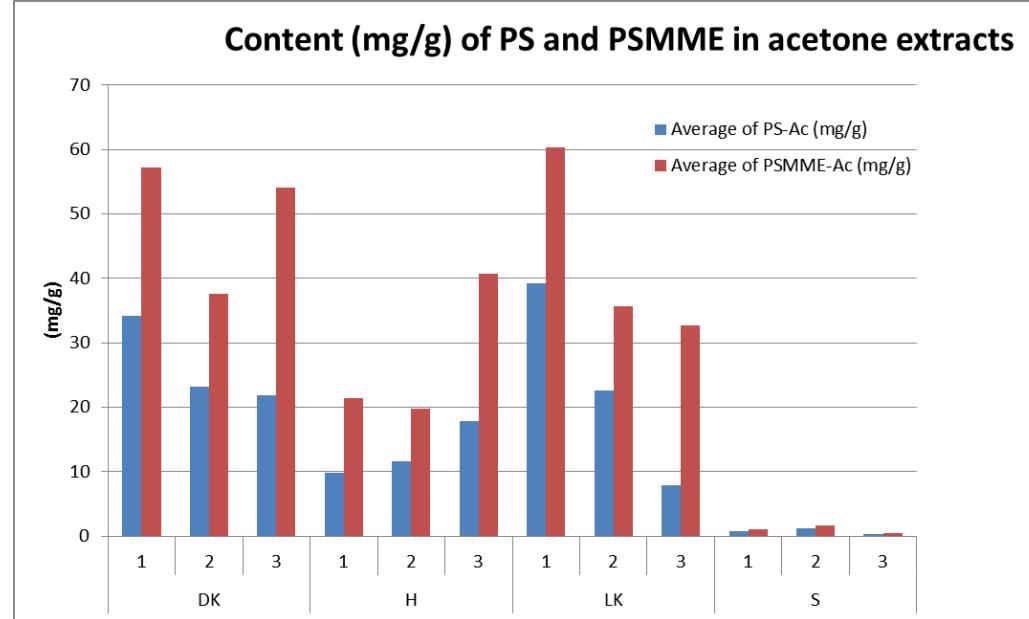

Content of PS and PSMME

*Overlook of activities*

# Summative results

- Living and dead knots, which are considered as waste material of wood industry contain highest concentrations of valuable compounds.
- PS is efficiently extracted with polar solvents.

# Dissemination
